

INOUTIC / GERMAN PROFILES
INGENEERING CREATIVITY

Warranty Certificate / Inoutic PVC-U Window Profiles

Inoutic profiles are manufactured from highly impact resistant PVC-U, using the latest technical findings and production methods. Inoutic PVC-U window profiles are environmentally compatible and fully recyclable. The recycled PVC material is recirculated to the production of new profiles.

Within a period of 10 years from date of delivery, we will substitute free of charge any profiles exhibiting defects, which can demonstrably be ascribed to manufacturing errors for which we are responsible.

Within the scope of the processing guidelines of Inoutic / Deceuninck GmbH and the quality and test regulations for PVC-U window profiles RAL-GZ 716/1 as well as DIN EN 12608:2003 (profiles made of unplasticised polyvinyl chloride), the warranty extends to

- › Shape in correspondence with drawing
- › Resistance against acids, alkaline solutions and greases
- › Weather-proofness and weather-resistance
- › Resistance against impact stress
- › Heat and cold insulation according to DIN 4108 as well as
- › Sound insulation according to DIN 4109

The warranty extends to white profiles. We shall not be liable for third-party processing defects. We can only accept warranty claims if the defect is promptly demonstrated to us after its detection.

The rights granted above shall in no way restrict any existing statutory warranty claims against the respective vendor for supplementary performance, cancellation of contract, purchase price reduction and compensation in respect of defects of our products mentioned. You are therefore entitled to the rights granted according to this certificate at your own discretion in addition to the aforementioned statutory rights.
